

Planetary Geology Final Papers

Due Wed. Dec. 13 12:15 (end of nominal exam time)

Format and Length: Double spaced, Minimum 10 pages

If figures or references occupy more than 2 pages, lengthen the paper accordingly. (That is, you should have at least 8 pages of actual double spaced text.)

While I give an expected length, write concisely. Use the required length to cover cover the material in greater depth.

Discuss the paper assigned (unless you are doing an alternate topic) and cover either background material (for recent papers) or more recent work (for “historical” papers).

Provide complete references for the key ideas or observations, and any quotes. These should primarily be from the main refereed scientific literature, although limited references to text books or web pages is permissible.
